WinLauncher Standard

Call it up before you search.

Call up frequently used files, folders and web links by name or tag.
Find and open them mainly from the keyboard.

v1.14.0

English Edition

Getting Started / Operation Reference

Ryuhi Works

Be ready in three minutes

1 Get ready

Store: install, then launch. ZIP: extract to a folder you control.

2 Run

Launch WinLauncher. It remains available in the system tray.

3 Add three items

Drag files or folders onto the app. Start with three items you use often.

Everyday search and launch, mainly from the keyboard

Alt+Space	Show WinLauncher
Ctrl+Enter	Open the selected item
Alt+Shift+Space	Add an item or path text selected in another app
Drag & drop	Drop files or folders onto the app to register them

Note: the app shows keys without a plus sign (Alt Space). This guide writes them as Alt+Space.

Five ways to add what you use

1 Drag & drop

Drop a file or folder onto the app.

2 Clipboard

Copy a path or URL, then press Alt+V.

3 Current selection

In another app, select an item or path text; press Alt+Shift+Space.

4 Add manually

Press Alt+N and enter Name, Tags, and Target.

5 Import

Import a CSV list. ZIP includes samples. Store users: see the page below.

Example: the name and tags are separate fields

Name: Quarterly review

Tags: project, finance

Tags help you find related entries together.

Sample CSV: samples in the public GitHub manual (click to open)

More than files and folders

1

Files and folders

Excel and PowerPoint files, PDFs, shared folders.

2

Web links

An intranet portal or any page you revisit.

3

Teams and OneNote

Channel, chat, section, or page links.

4

SharePoint

Document links. Use SPLinkConverter where helpful.

Opening a link still depends on your existing access rights; WinLauncher does not grant access.

Fields used when adding and editing

1 When this form opens

Adding one item opens this form. Alt+Enter reopens it for editing.

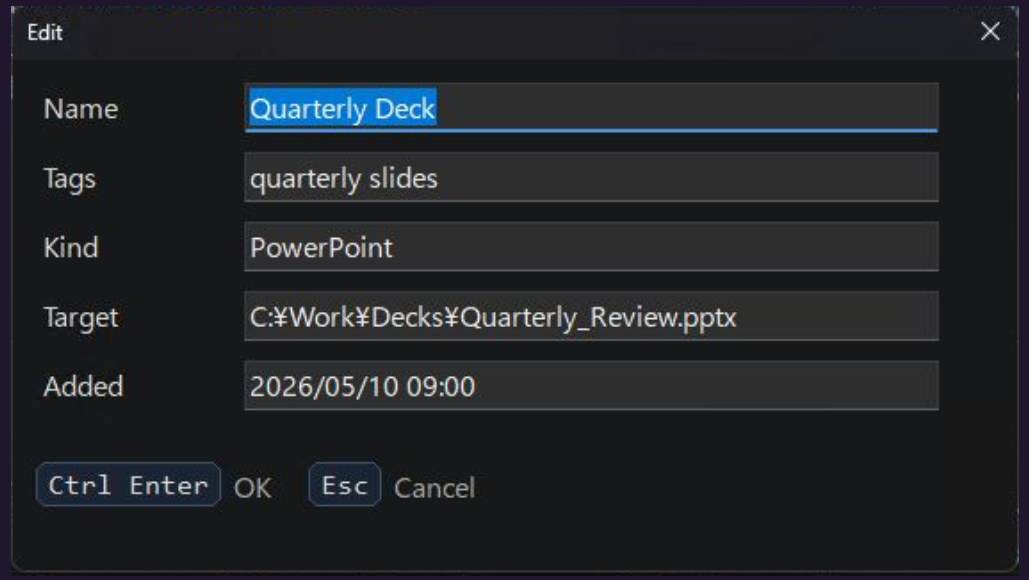

2 Name and tags

Enter a memorable Name and searchable Tags; check Target.

3 Save

Press Ctrl+Enter. Edit later with Alt+Enter.

v1.14.0 screen

The entries, run counts and dates shown are sample data

For a single item, the edit form opens. Bulk registration behaves differently.

Filter by name and tag. Open with Ctrl+Enter

Alt+Space → type a word you remember → select with ↑↓ → Ctrl+Enter

1 AND search

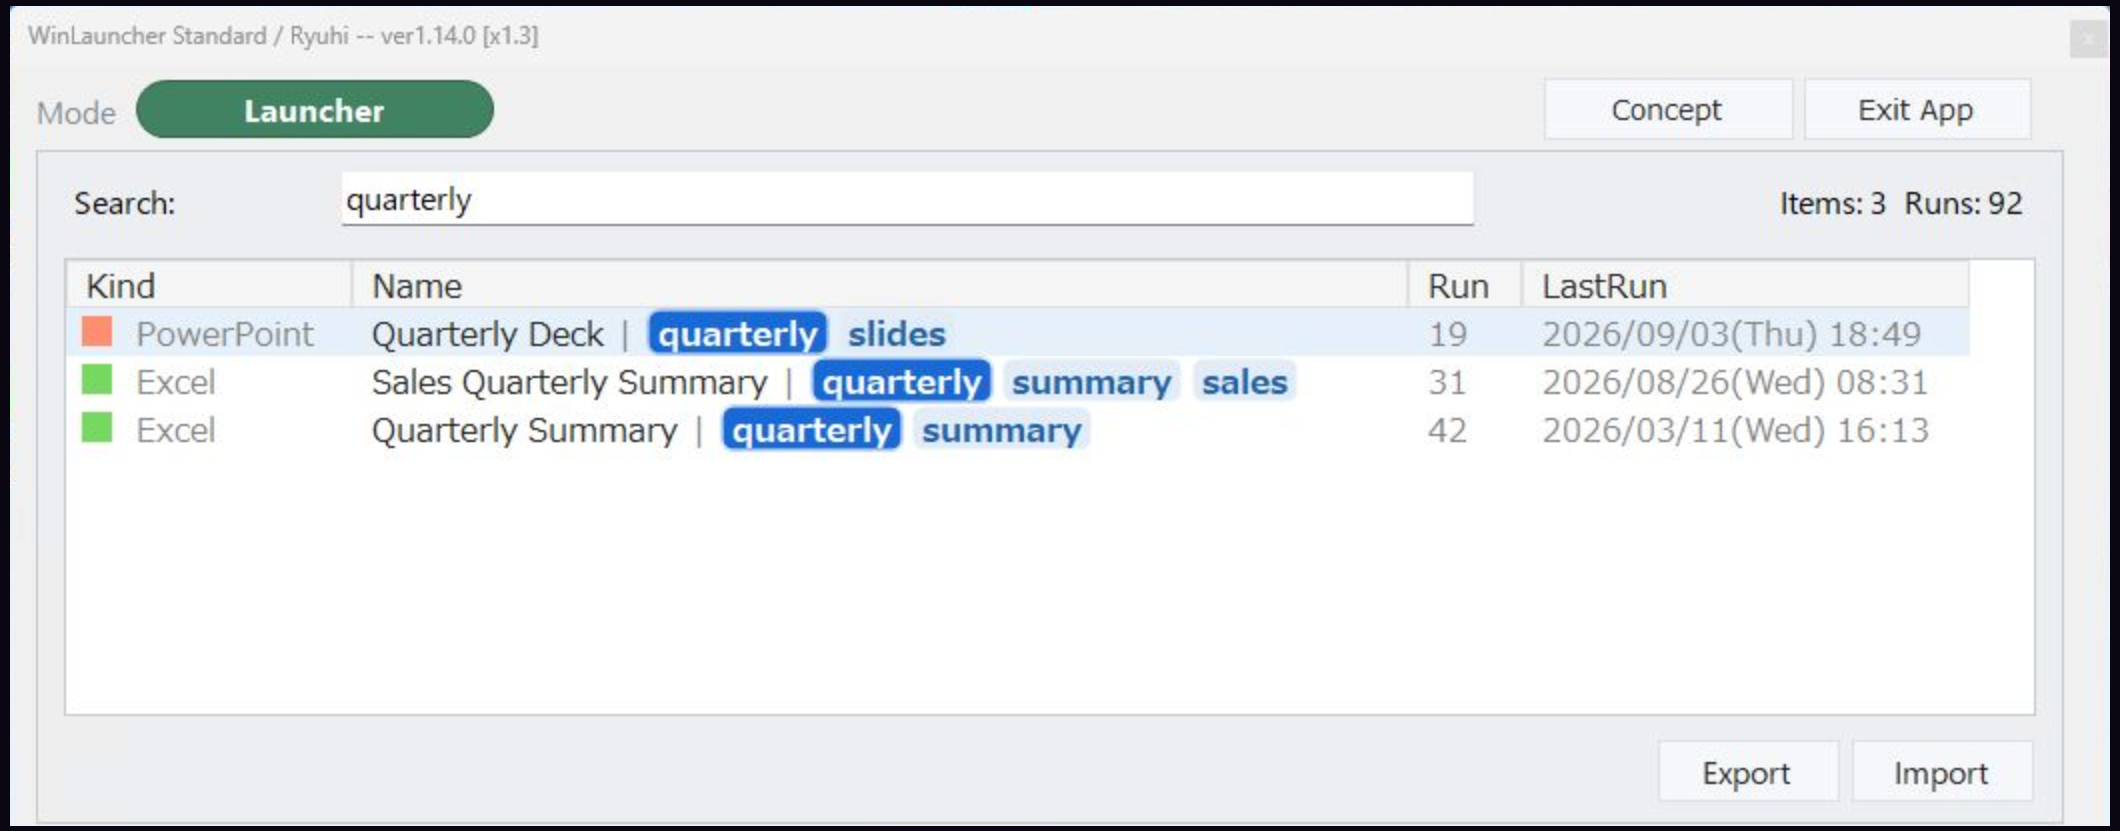

Separate terms with spaces to keep only items matching every term.

2 Exact tags

Tags appear as blue labels; exact matches are easy to spot.

3 Multi-select

Use Shift+↑↓ to select several rows for path or SharePoint-link copying.

The entries, run counts and dates shown are sample data

You do not need to remember the filename. Give each item the name you naturally recall.

Reuse tags to find things later

1 Start typing

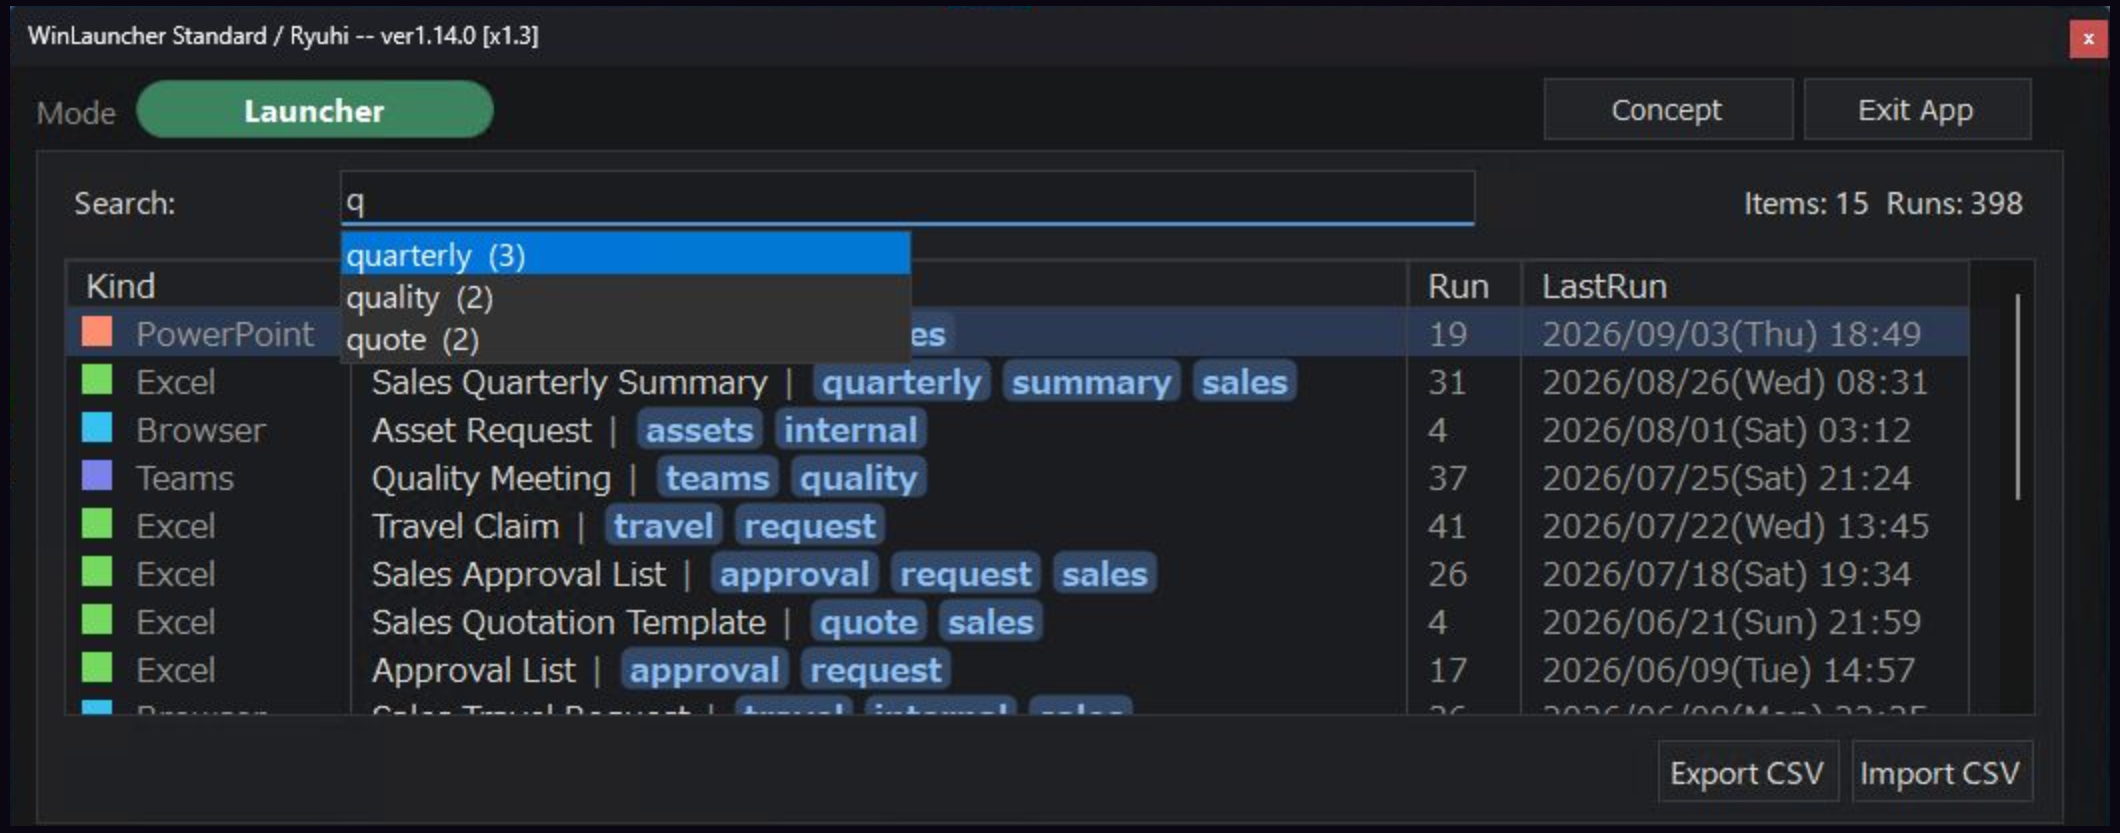

Type the beginning of an existing tag to show suggestions.

2 Accept with Tab

Choose with Up/Down; press Tab to fill the search box.

3 Search by tag

For example, quarterly filters to entries with that tag.

The entries, run counts and dates shown are sample data

Alt T edits tags on selected items. Prefix tags to remove with -. Confirm changes with Ctrl Enter.

Switch where you search with Ctrl+Alt

Recent

Recent files (Office added v1.14.0)
v1.5.0 series

SearchHub

Web search entry
v1.5.0 series

SPLinkConverter

SharePoint link helper
v1.5.0 series

Edge

Default-profile favorites bar
v1.5.0 series

Launcher

Your registered list
v1.1.0 series

Snippet

Reusable text
v1.3.0 / mode v1.6.0

Everything

Requires Everything installed and running
v1.5.0 series

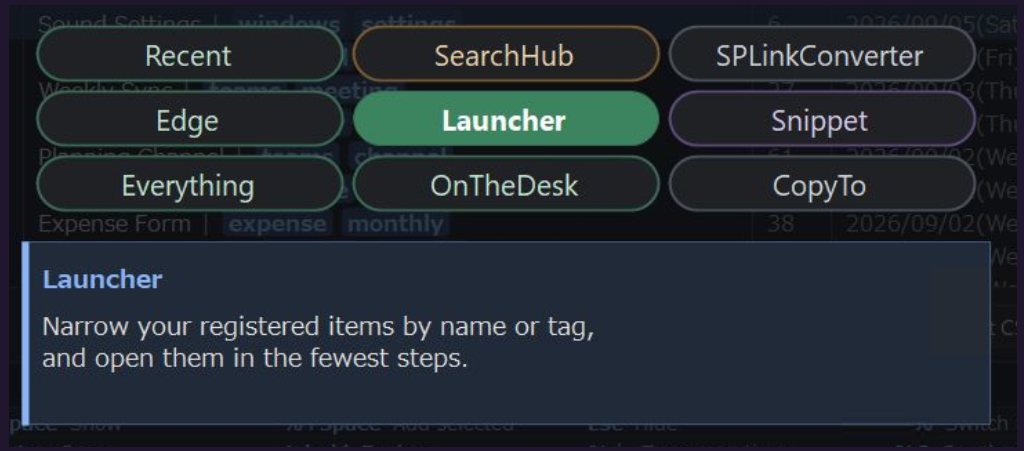

OnTheDesk

Open documents and folders
v1.10.0 series

CopyTo

Choose a destination
v1.7.0 series

v1.14.0 screen

The entries, run counts and dates shown are sample data

Hold Ctrl+Alt, choose with the arrow keys, then release to confirm. Return to Launcher the same way.

Explore folders around the selected item

1 Select an entry

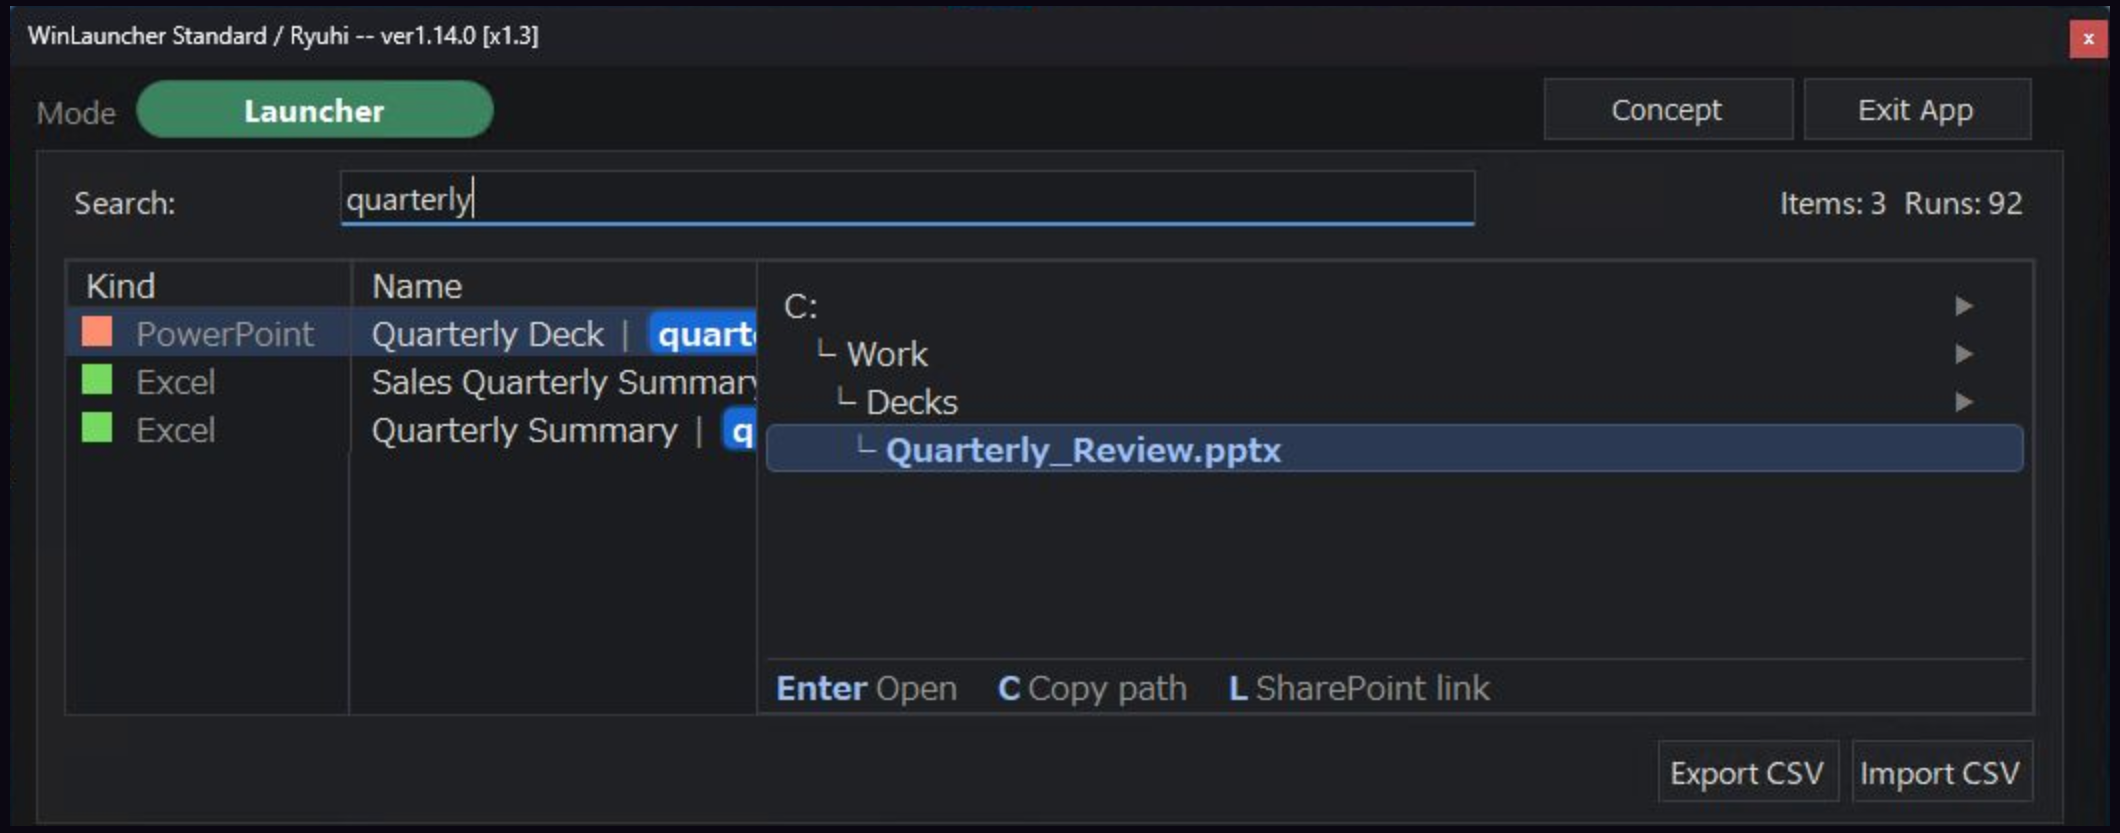

Hold Ctrl to show its folder tree.

2 Explore the hierarchy

Up/Down selects. Right enters. Left returns.

3 Open what you find

Enter opens the selected file or folder.

The entries, run counts and dates shown are sample data

Explore parent folders, sibling files and subfolders. C copies a path. L copies a SharePoint link.

Reusable text, called up the same way

1 Switch and add

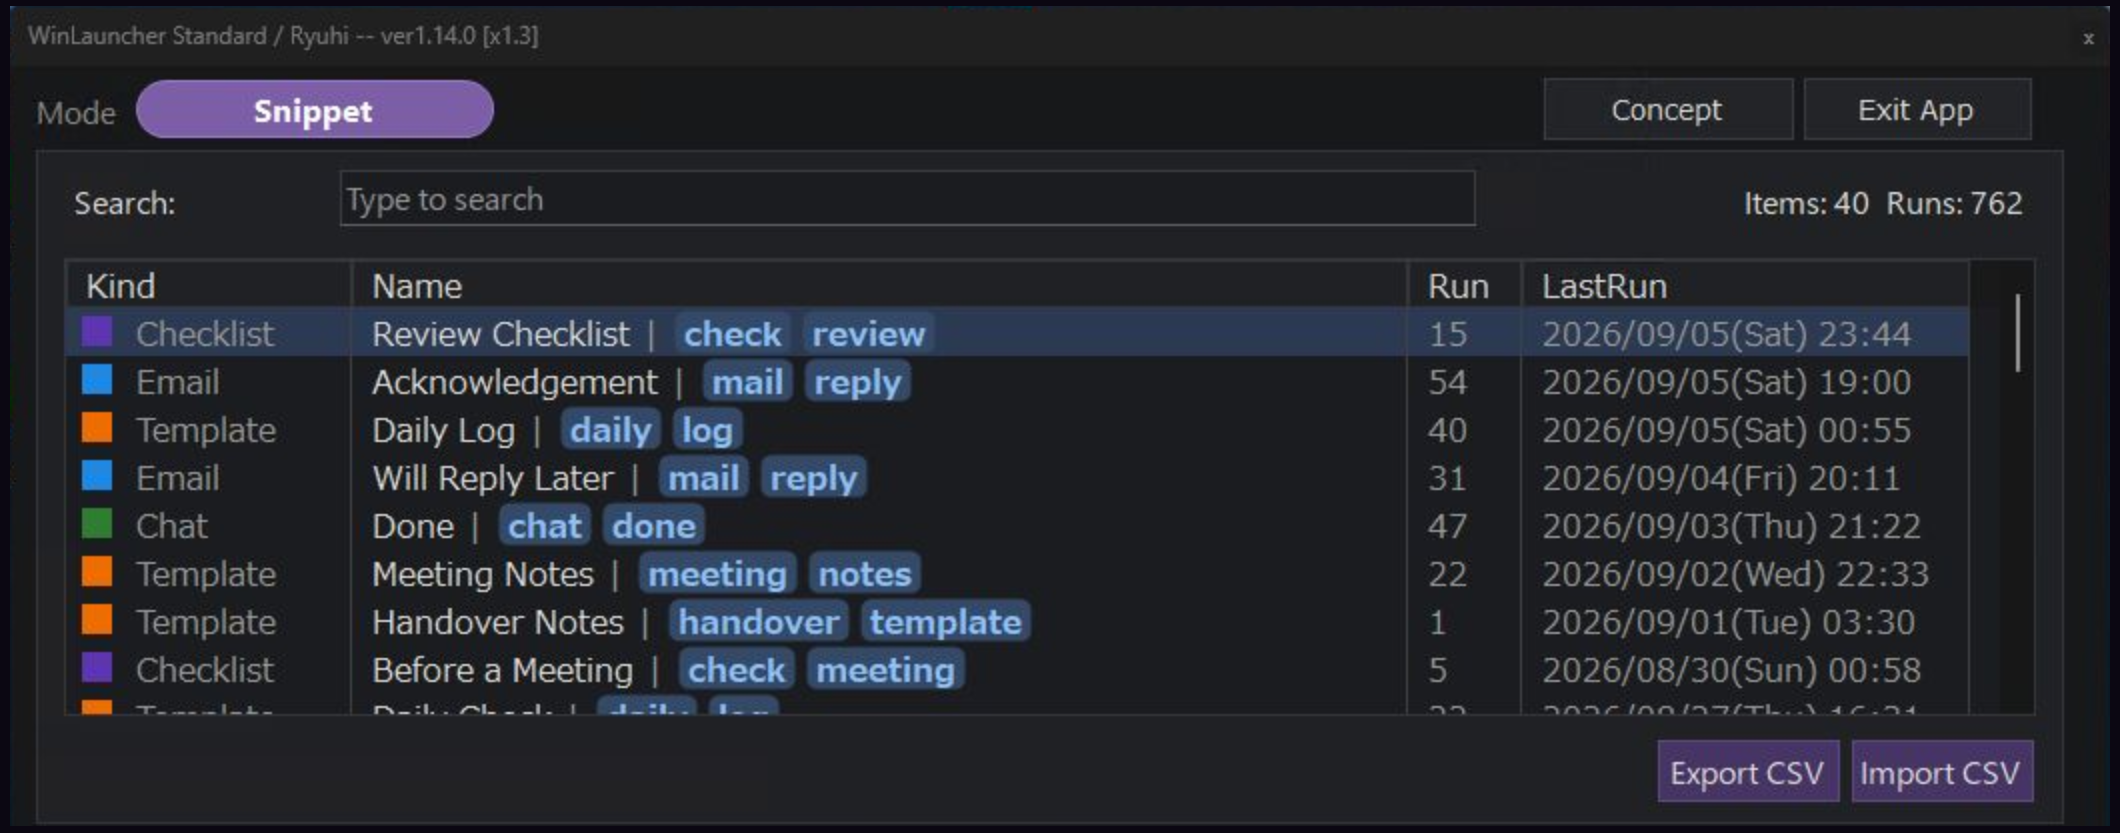

Choose Snippet via Ctrl+Alt. Alt+N adds manually. Alt+V adds copied text.

2 Find and edit

Search title, body, or tags. Edit with Alt+Enter.

3 Copy

Ctrl+Enter copies the text. Use Ctrl+V in the destination app.

The entries, run counts and dates shown are sample data

Use Alt+N or Alt+V to register snippets.

Recent upgrade v1.14.0 series / Modes: see page 8

One search box, several everyday entry points

1

Web and history

Recent combines Windows and Office history. Alt F filters types in Recent.

2

Shared links

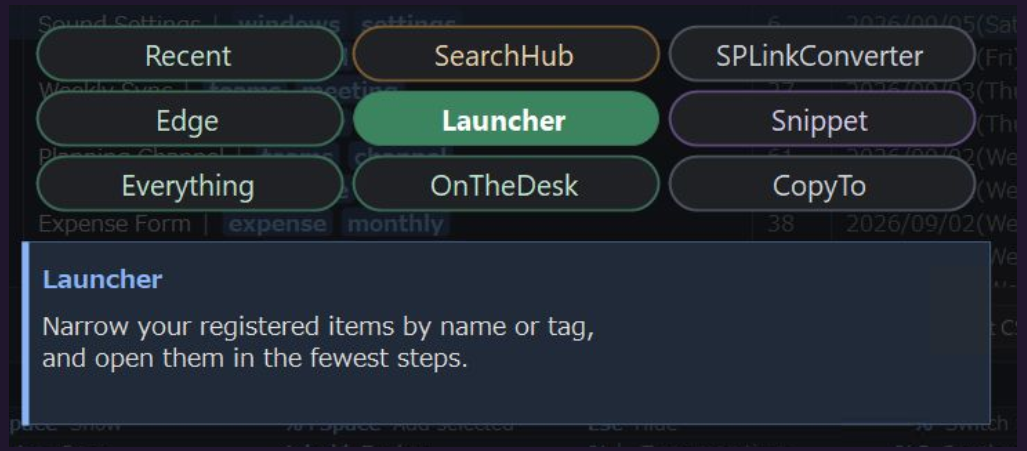

Use the SharePoint link conversion helper.

3

File actions

Switch to CopyTo, Everything, and other modes.

v1.14.0 screen

The entries, run counts and dates shown are sample data

Recent results depend on your Office setup and type filter.

Keep data and updates under control

A

Registered items

Export Launcher and Snippet lists as CSV backups.

B

Backups

Startup snapshots provide a recovery point.

C

CSV

Launcher and Snippet data can be imported and exported.

D

Updates

Export CSV and check your current items before switching versions.

ZIP edition: do not place the executable itself in Startup

For ZIP edition auto-start, press Win+R, open shell:startup, and place a shortcut to WinLauncher.exe there.

Version labels show the app's v1.x.0 series, not each store's publication date.

Find the keys for what you want to do

Show & switch

Alt+Space	Show the window; Esc hides it
Ctrl+Alt	Choose with arrows; release to switch
Alt+Shift+D	Switch light / dark

Register

Drag & drop	Drop files or folders onto the app
Alt+Shift+Space	Add a selected item or path text
Alt+V	Add a copied path, URL or snippet
Import CSV button	Add items from a list

Find & run

Ctrl+Enter	Open one item / copy snippet text
Hold Ctrl	Explore folders (Right enters, Left returns)
Alt+F	Filter by type in Recent mode
Alt+S	Search with Google

Edit & copy

Alt+Enter	Edit the selected item
Alt+T	Update tags on selected items
Alt+C	Copy path (snippet: copy body)
Alt+L	Copy a SharePoint link

Available keys vary by selected mode and screen.

Light and dark colour schemes

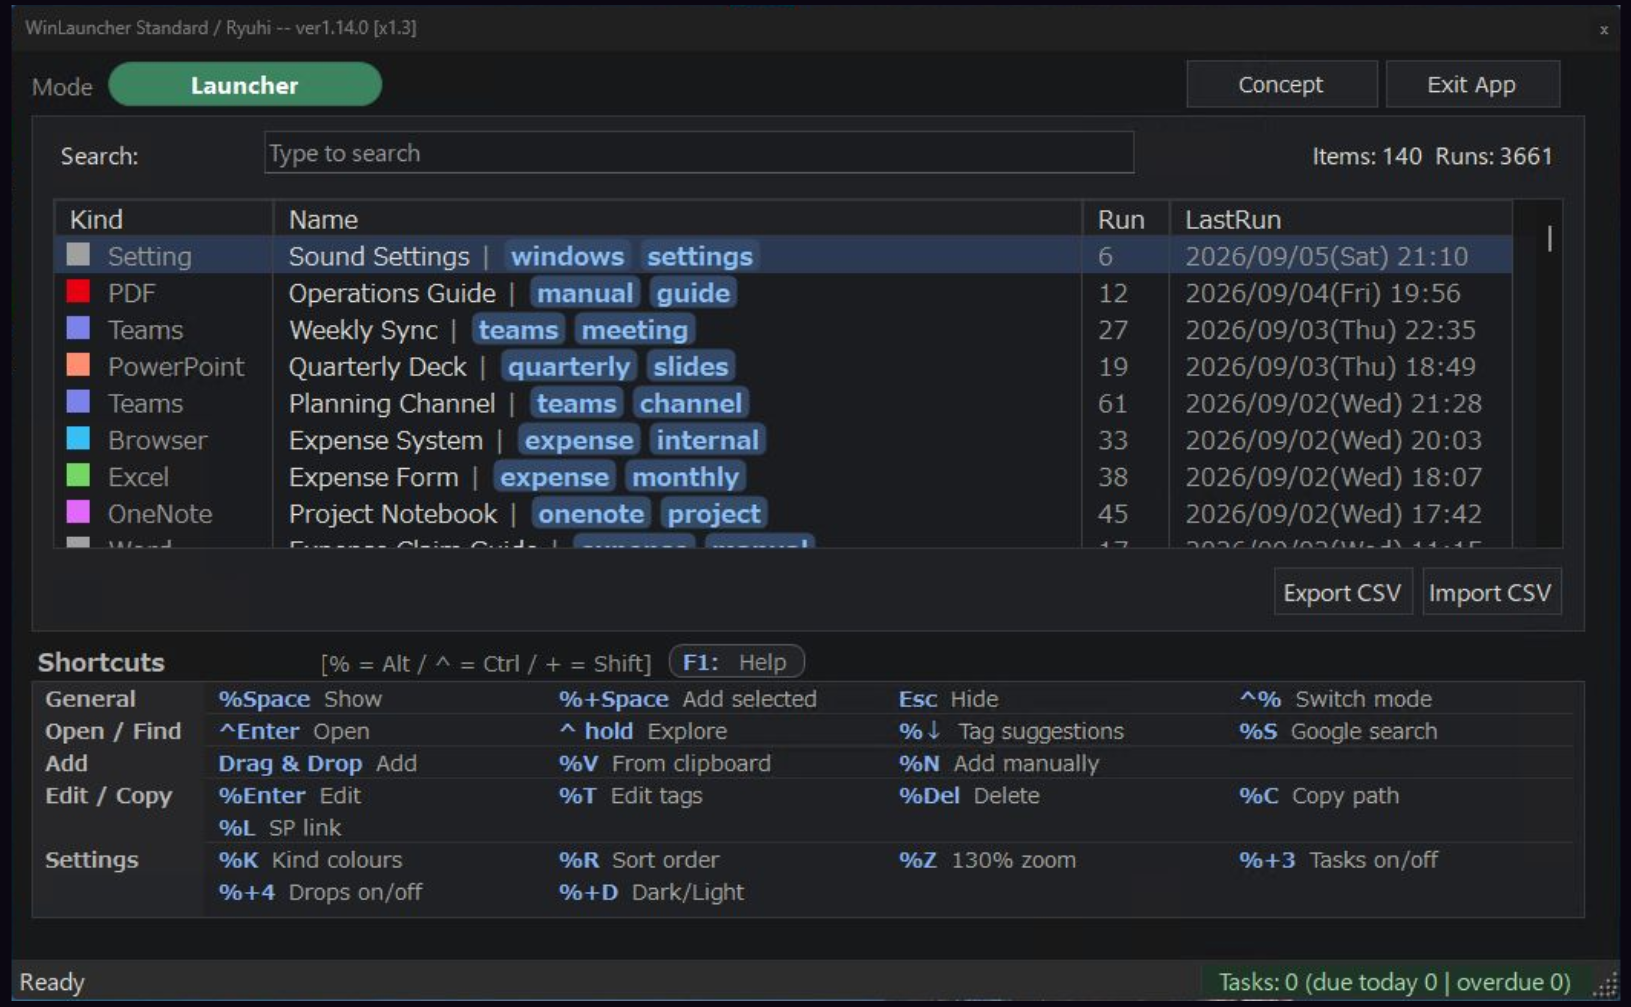

Alt+Shift+D

Switch the colour scheme

WinLauncher saves your choice and restarts automatically to apply it.

Choose your scheme manually. It does not follow Windows automatically.

If the automatic restart fails, reopen the app yourself.

When something does not work

1

Window is missing

Press Alt+Space. The x button hides the app; it does not exit.

2

Exit completely

Use Exit App, or right-click the tray icon and choose Exit.

3

Windows shows a warning

For ZIP downloads, check the source and filename if Windows shows a warning.

4

Need more detail

Read the included README, change log, and guide.

WinLauncher Standard v1.14.0 / RyuhiWorks
