

[Background]

- I dislike wasting time hunting for frequently used files, folders, websites, channels, and OneNote pages.
- I want to save favorites and open them effortlessly.

About WinLauncher

Start everyday Windows work with Alt+Space

WinLauncher is a practical Windows launcher for opening frequently used files, folders, websites, OneNote pages, SharePoint, and Teams links in seconds.

Spend less time asking, "Where was that file?" and build your own fast path through daily work.

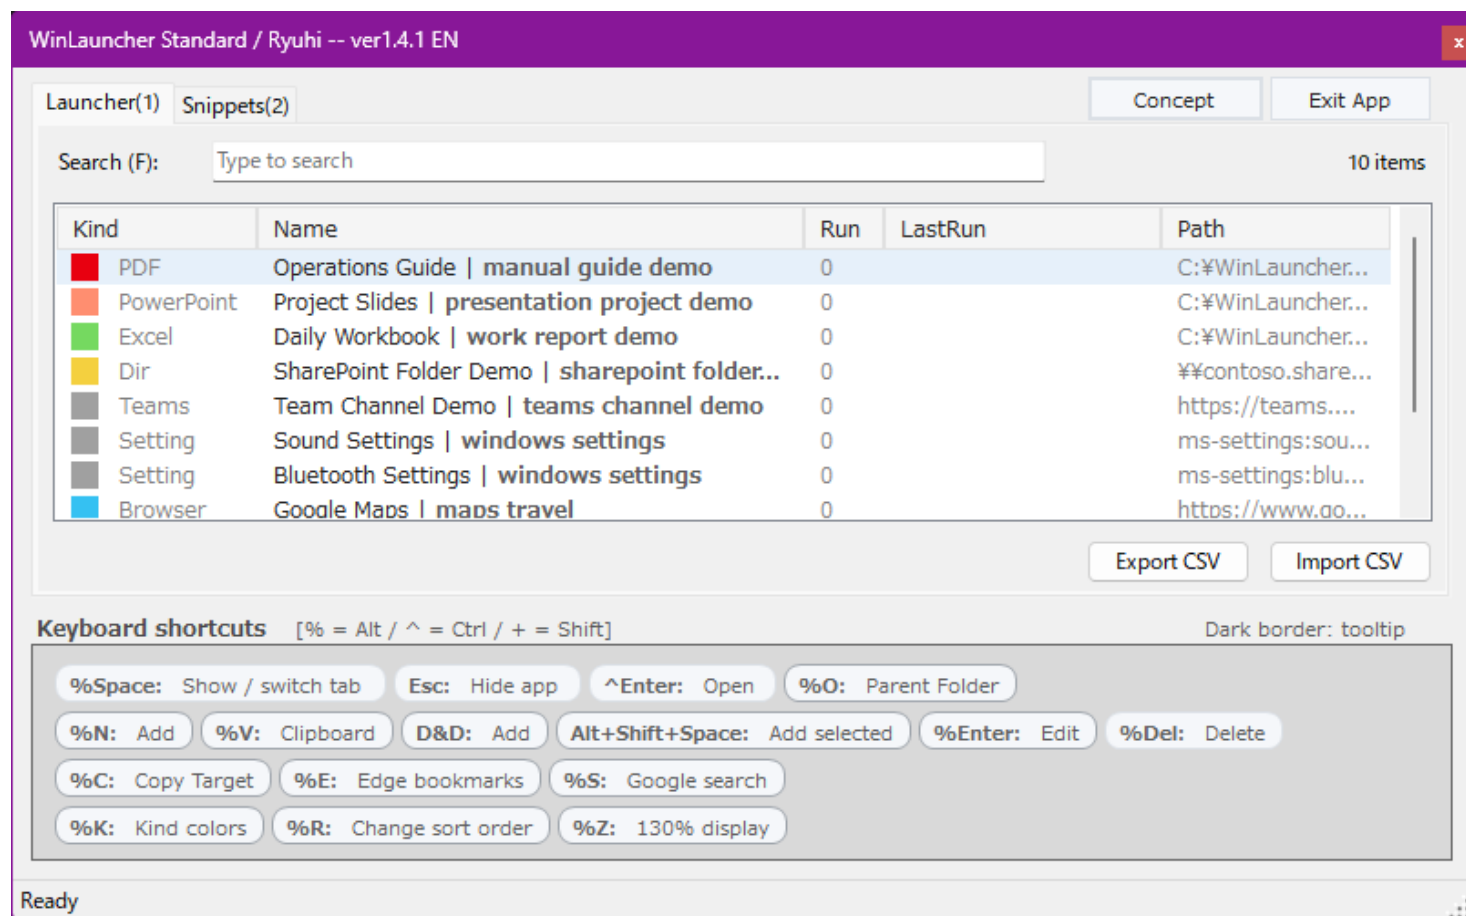

The keyboard-first design also works well for personal projects.

UI Summary: Launcher Tab

4

One search box and one list: a focused, uncluttered interface.

UI Summary: Launcher Tab

Type, move with Up/Down, and open. Everything stays in the search box.

0 Show

Press Alt+Space anywhere to show WinLauncher. It stays in the system tray after startup.

1 Add

Add items by drag and drop

2 Search

The search box always keeps focus. Use spaces for multiple terms. Tag suggestions appear as you type.

3 Open

- Keep typing, then move the highlight with Up/Down.
- Press Ctrl+Enter to open the selected item.

Notes

More useful features are covered later.

Tips

Shortcuts are collected in compact help chips. Hover dark-border chips for tooltips.

[Tip]

- ① Drag an item
- ② press Alt+Space
- ③ then drop it.

You can also add items by the other registration methods covered later.

%K: Kind colors

%R: Change sort order

%Z: 130% display

Ready

Text after "|" is treated as a tag.

Four ways to add items, balancing Efficiency and Generality

← Efficiently

General →

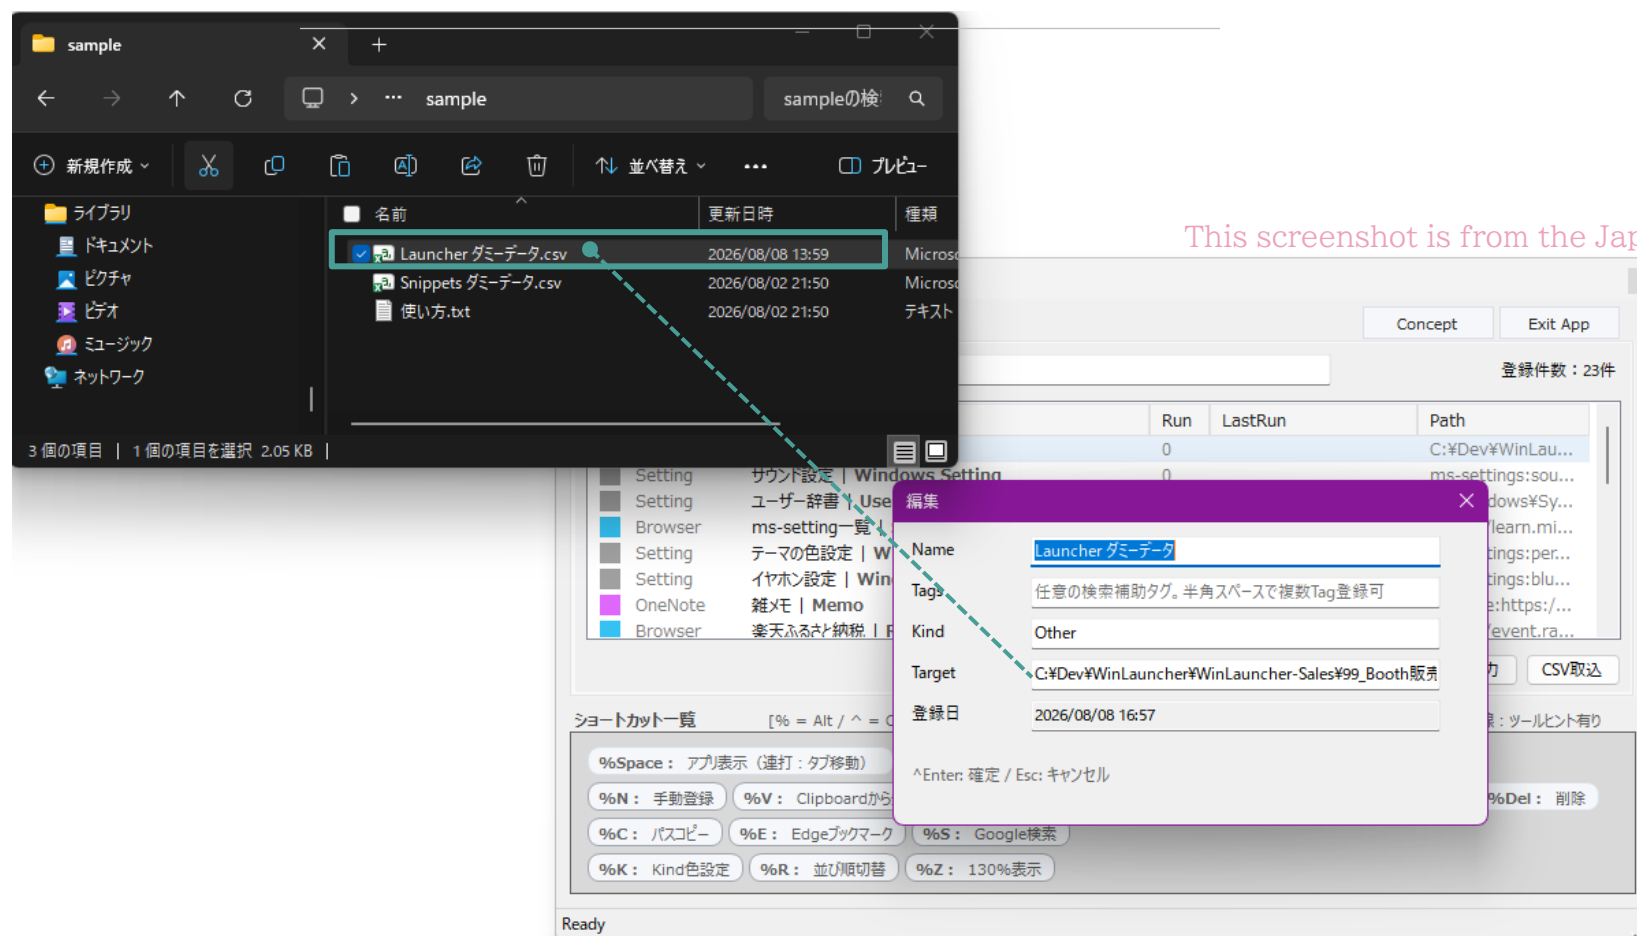

Item Type	Method			
	Select and Add (Alt+Shift+Space)	Drag & Drop	Clipboard (Ctrl+C -> Alt+V)	Manual Add (Alt+N)
File (File Explorer)	Yes	Yes	Yes	Yes
Folder (File Explorer)				
Text URL or path that can be dragged	No	No		
Teams (channel or chat link)		No		
OneNote (section, page, or paragraph link)				
ms-settings: (Windows Settings link)	See next			

Add the Selected Item (Alt+Shift+Space)

Press Alt+Shift+Space.

If selection capture is unavailable in your environment, use drag and drop instead.

1 Select a file, then press Alt+Shift+Space

You can also select a URL or other text in an app and press Alt+Shift+Space to add it.

Add with Drag & Drop

Note: Clipboard registration is also convenient.
You can also copy a path and press Alt+V.
See the next slide.

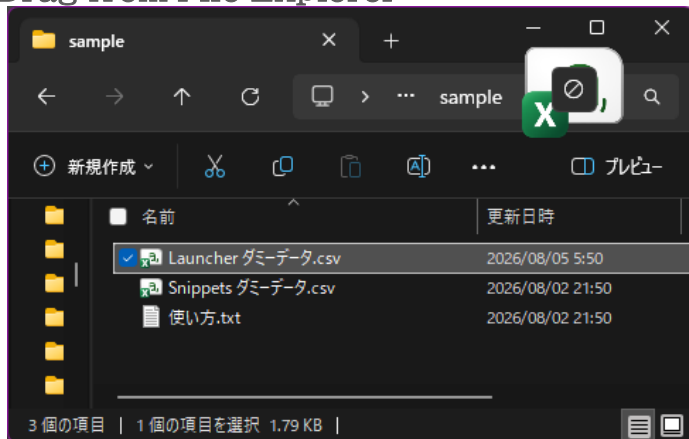

8

These screenshots are from the Japanese version.

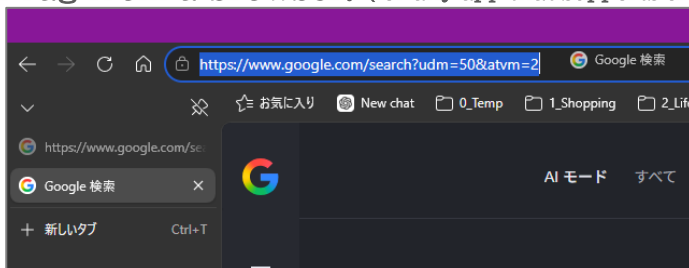

Drag and drop is quick. Clipboard registration is another convenient option.

1 Drag from any source

Drag from File Explorer

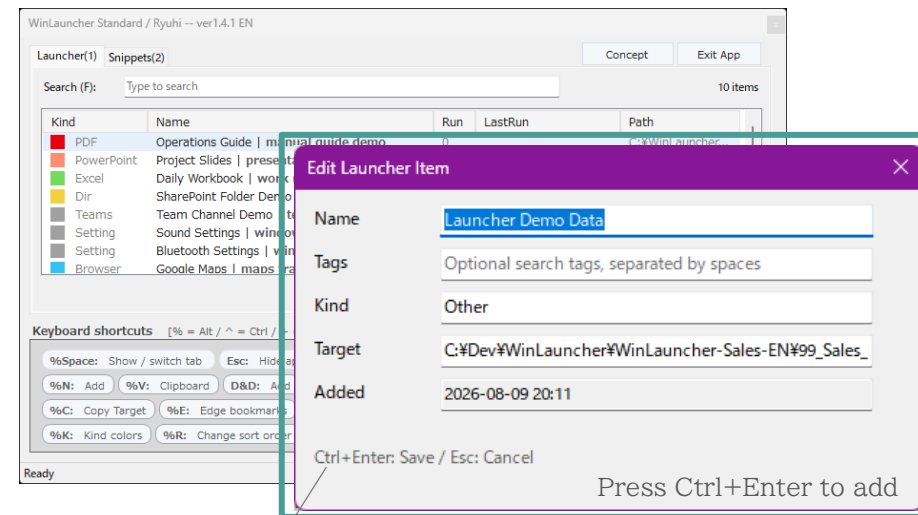

Drag from a browser. (or any app that supports dragging text)

2 Drop into WinLauncher

Press Alt+Space to show WinLauncher

WinLauncher

(For a single item)

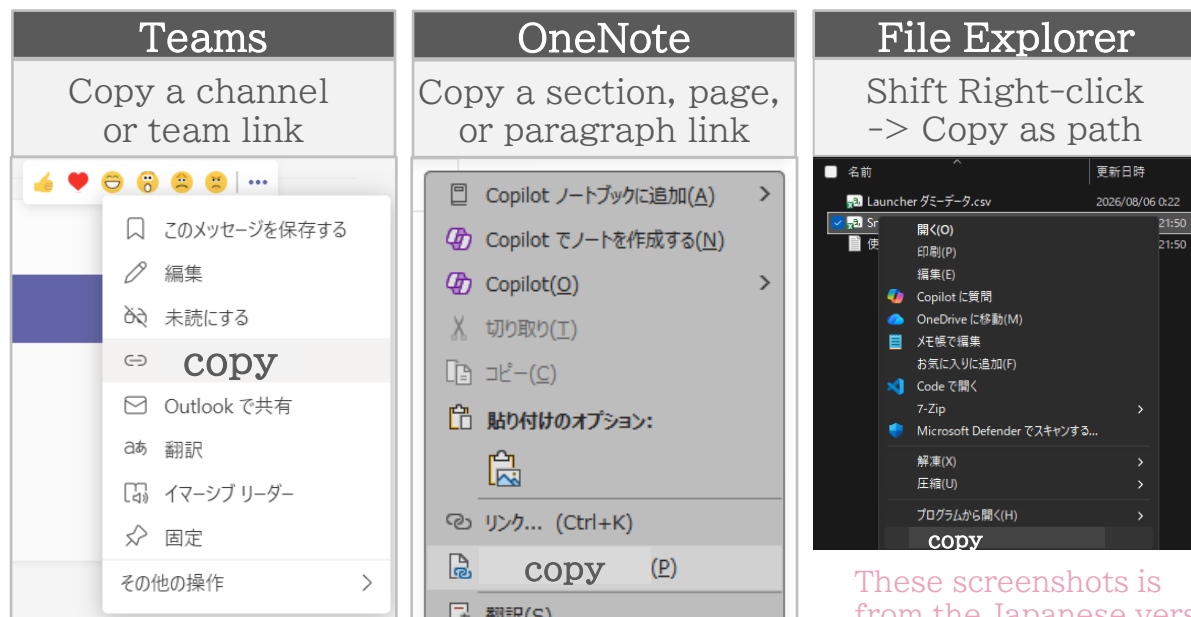

The edit window opens automatically.
Set the Name and Tags.

Tags appear as suggestions during search.
Short alphabetic tags are easy to type.

Add from the Clipboard (Ctrl+C -> Alt+V)

You can also add OneNote and Teams links.

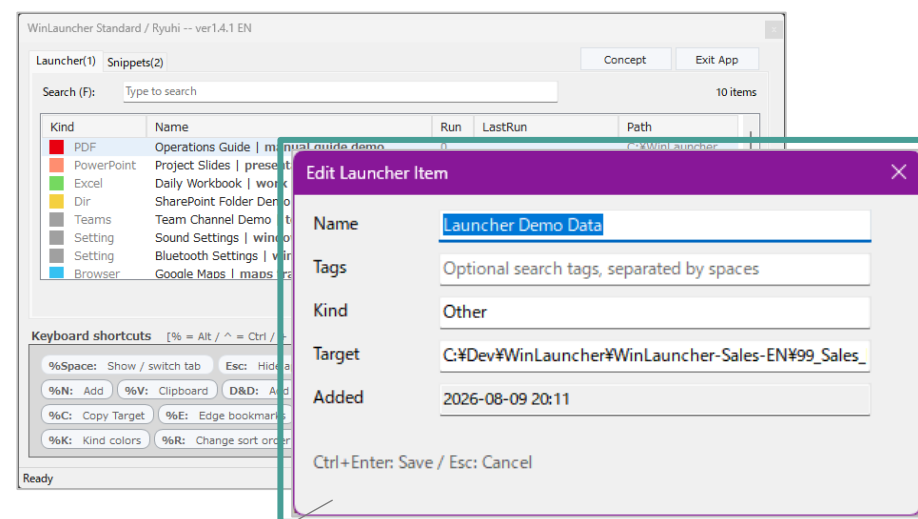

1 Copy a link in any app

Teams and OneNote links can open in their desktop apps.

These screenshots is from the Japanese version.

2 Press Alt+V to add

The edit window opens automatically. Set the Name and Tags.

Tags appear as suggestions during search. Short alphabetic tags are easy to type.

Search and Tags (Up/Down)

Tags make search faster. Use short tags for each project.

Quick Start Guide

A. Run WinLauncher for the first time

1. Extract the downloaded ZIP to a folder you control.
2. Run WinLauncher.exe.
3. Press Alt+Space to show WinLauncher.
4. Add three items you use every day, or import the included sample CSV files.

B. Start WinLauncher automatically

1. Press Win+R, enter shell:startup, and press Enter.
2. Create a shortcut to WinLauncher.exe in the Startup folder.

C. Exit the app

- Closing the window hides it in the system tray.
Use the tray menu and choose Exit to stop the app.

Appendix

Design Notes and Additional Information

Additional UI: Snippets Tab

This screenshot is from the Japanese version.

Store reusable text, code, and message templates.

Add

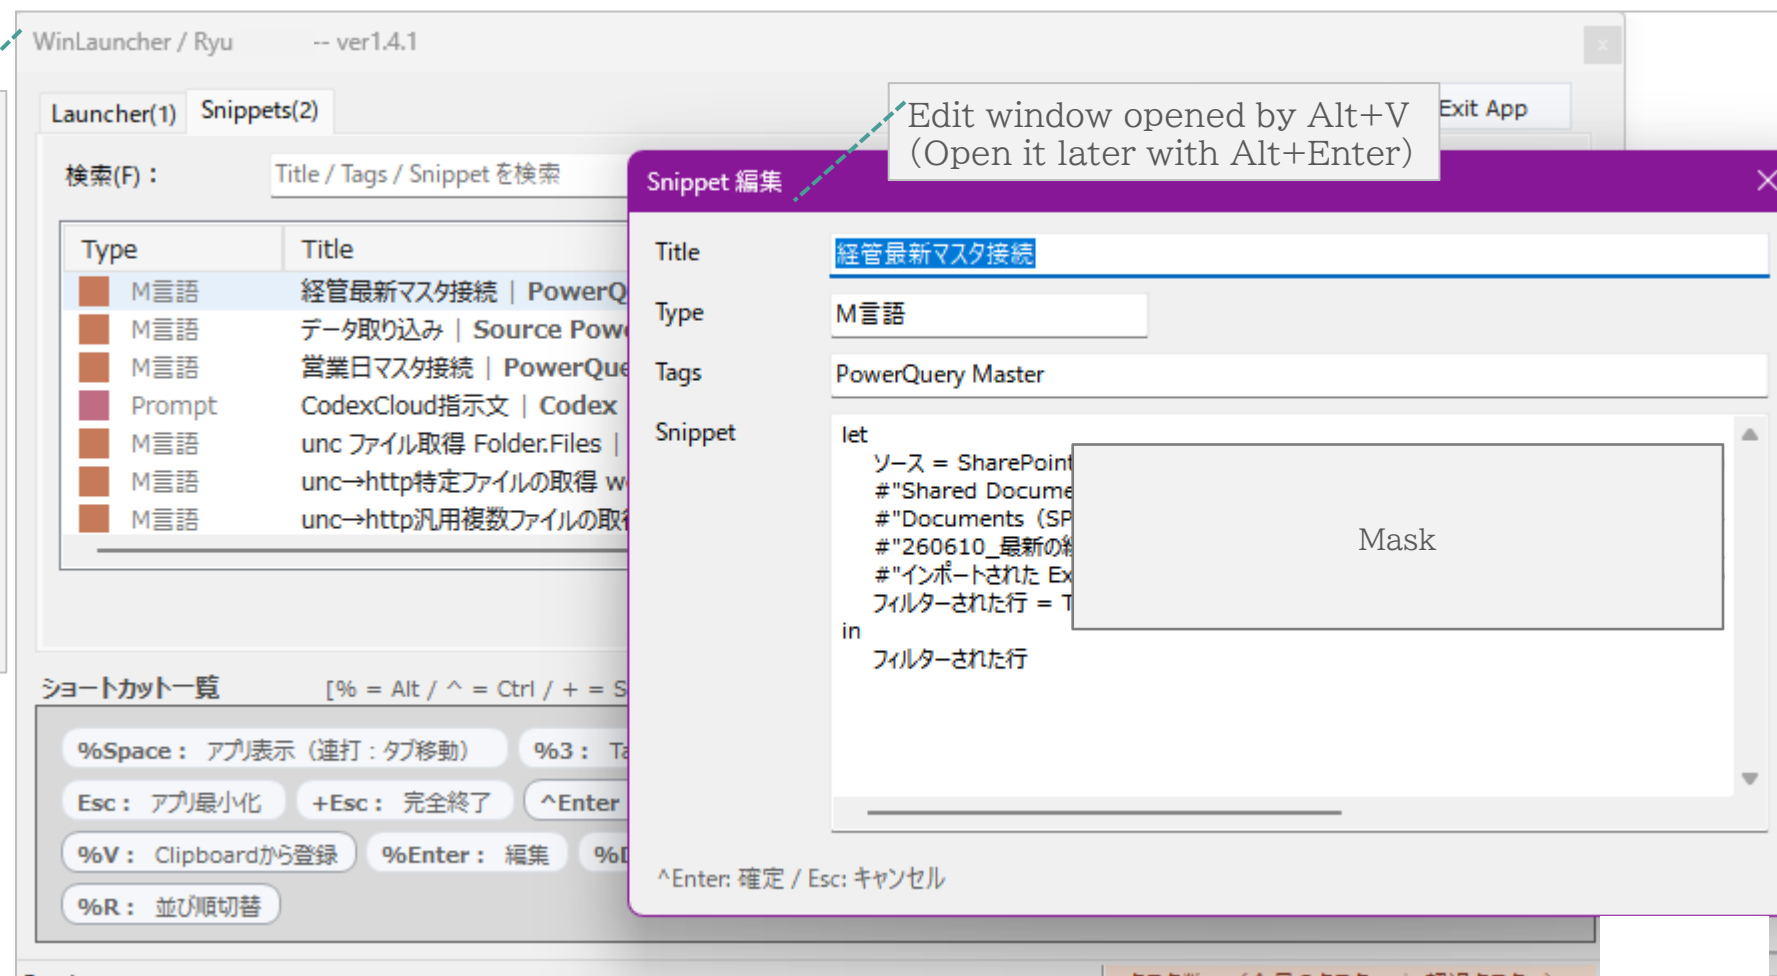

Copy text, press Alt+V, and complete the edit window.

Use

Press Ctrl+Enter to copy the selected snippet.

Open the Snippets tab

Alt+Space first shows Launcher. Keep holding Alt and press Space again, or press Alt+2, to switch to Snippets.

Launcher Design Principles

A fast, simple launcher with no extra steps.

Purpose	Open frequently used URLs and files with the fewest possible steps.
UI Design	• Keep focus in the search box and complete every action from the keyboard.
Design Details	• Alt+Space shows the app, so related actions use Alt shortcuts. • Add by drag and drop or clipboard (Alt+V). • Move the selected row with Up/Down without leaving the search box.
Supported Items	• URLs (https://...) • Folders and most files visible in File Explorer • OneNote links (onenote:...)
Useful Ideas	• Save Teams channel links. • A OneNote memo page. • A .bat file for instant access.

Compared with Managing Links in Excel

A purpose-built workflow is much faster than a general spreadsheet.

	Excel	WinLauncher
Adding	Many cells may need manual updates.	Drag and drop keeps registration quick.
Opening	Open a filter, focus its search box, type, apply the filter, then click the path.	Show, search, then press Ctrl+Enter. Fast and smooth.
Features	Can maintain a list.	Fast registration / OneNote URL support Usage history / Open parent folder System tray operation
Summary	Flexible as a general table, but adding and opening items takes more steps and cannot stay keyboard-only.	A focused tool makes adding and opening faster through keyboard shortcuts.

Thank you
